## BOVEUR – Institutional Redemption & Value Framework

This document outlines the redemption, valuation, and control framework governing the BOVEUR settlement token, an issuer-administered, treasury-backed digital instrument designed for institutional-grade settlement.

### 1. Instrument Classification

BOVEUR is a controlled financial settlement instrument. It is not a speculative or exchange-traded asset. It operates under issuer governance, with structured issuance, delivery, and redemption controls.

### 2. Source of Value

The value of BOVEUR is derived from treasury-backed reserves and the issuer's redemption framework. It is not determined by public market trading, liquidity pools, or exchange pricing mechanisms.

### 3. Redemption Mechanism

The redemption process follows a defined institutional model:

- Token holder returns BOVEUR to issuer
- Tokens are programmatically burned on-chain
- Treasury releases corresponding value against validated instruction

All redemption flows are subject to issuer validation, reconciliation, and compliance checks.

### 4. Monetisation Position

BOVEUR is not designed for independent holder monetisation. Value realisation occurs exclusively through issuer-administered settlement or redemption processes within the defined framework.

### 5. Control & Governance

All token operations are governed by issuer-controlled smart contract roles and operational policies, including:

- Mint controls and delays
- Pause / unpause enforcement
- Daily issuance limits
- Audit and reconciliation tracking

### 6. Compliance & Audit

Each transaction is supported by structured audit artifacts, including: • Settlement instruction file • Reserve reference • Delivery payload • On-chain transaction hash • Delivery and audit reports This ensures traceability and institutional-grade transparency.

## **7. Key Distinction**

BOVEUR differs from public cryptocurrencies in that it represents a controlled financial obligation linked to issuer-managed reserves, rather than a decentralized or market-driven asset.
